ALUMINUM BUILDING PRODUCTS

STORE FRONTS - ENTRANCES

Rebco's extruded aluminum store fronts and entrances are of the highest quality. A complete new line of door frame and sash sections, in a variety of sizes incorporates a new vinyl glazing principle, allows more freedom and flexibility in design.

Rebco's new division and mullion bars with snap on faces for the first time eliminates all exposed methods of fastening. Combined with new snap on face sash sections and vinyl glazed door frame sections, an entire storefront installation is practical without exposing fastening screws.

In keeping with our policy of improving and expanding Rebco's products a complete and comprehensive line of the following products are available:

- Welded aluminum entrance doors, frames and hardware.
- Sash, sill covers and bulkhead trim.
- Division bars, mullion bars and corner bars.
- Curtain wall sections and operating sash.
- Awning hoods, canopy facias and louvered canopies.
- Access doors and slide up windows.
- Aluminum hand rails.
- Extruded and formed aluminum facing materials.
- Aluminum and Stainless Steel mirror frames and mirror moldings.
- Aluminum letters, name plate holders and inserts.
- Interior partitions and movable walls.
- Chalk board moldings and counter posts.
- Miscellaneous tubes, bars, channels, angles and pipe.

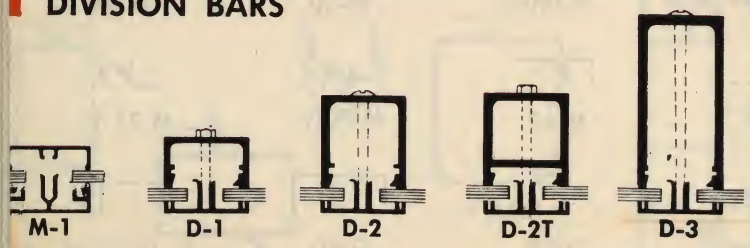
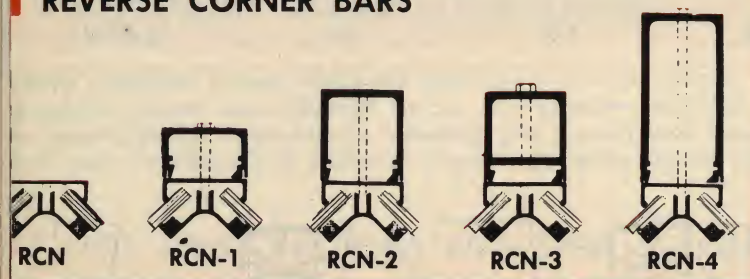
DIVISION BARS - CORNER BARS - REVERSE CORNER BARS

DIVISION BARS

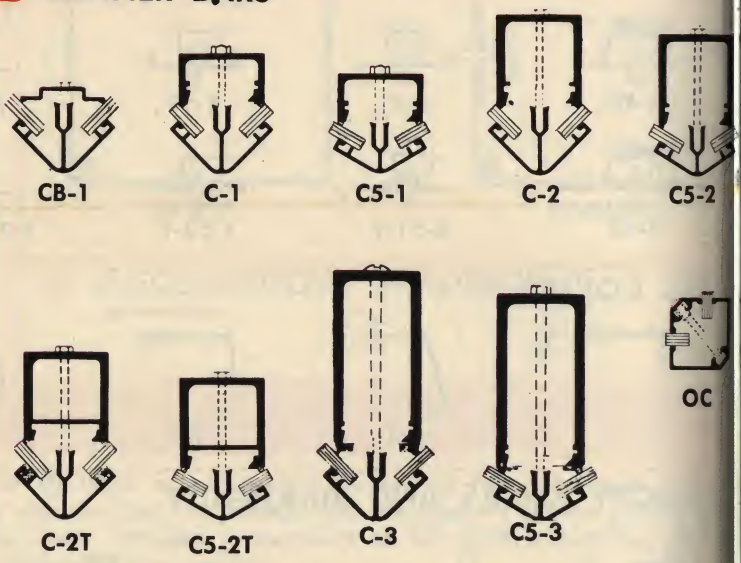


Rebco division bars are manufactured in many additional combinations including ¼" deep and ½" deep faces. Vinyl cushions for the bar faces and aluminum reinforcing cushions are available to meet any glass setting requirement. Bar stiffeners are finished in the same manner as the exterior face insuring a quality installtaion inside and out. Send for Rebco's complete catalog showing full line of division bars.

REVERSE CORNER BARS



CORNER BARS



Additional corner bars are manufactured in other combinations incorporating aluminum reinforcing cushions and vinyl cushions for the bar faces. Corner bars are the universal type accommodating angles of 90° to 120° and 120° to 165°. Send for Rebco's complete catalog showing the full line of corner bars.

DIVISION BARS WITH CONCEALED FASTENINGS

Now available for the first time, division and mullion bars without exposed fastenings! First in the industry with a major new concept in division bars, Rebco further enhances the beauty of its store front line by the elimination of exposed fastenings. By combining these bars with new snap on face sash and vinyl glazed frame sections, an entire store front installation is possible in which all exposed screws are eliminated. Many different sections are available with optional vinyl or aluminum cushions. Send for Rebcos complete catalog showing the full line of bars.

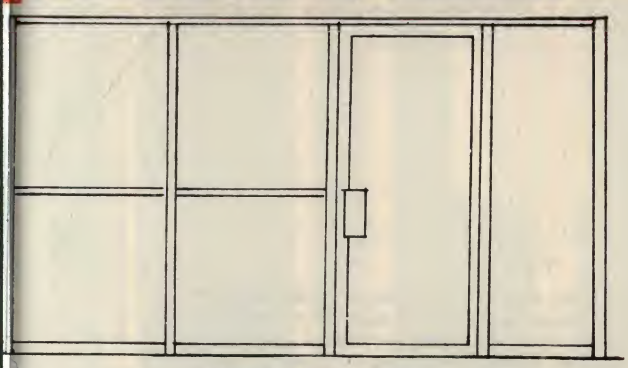
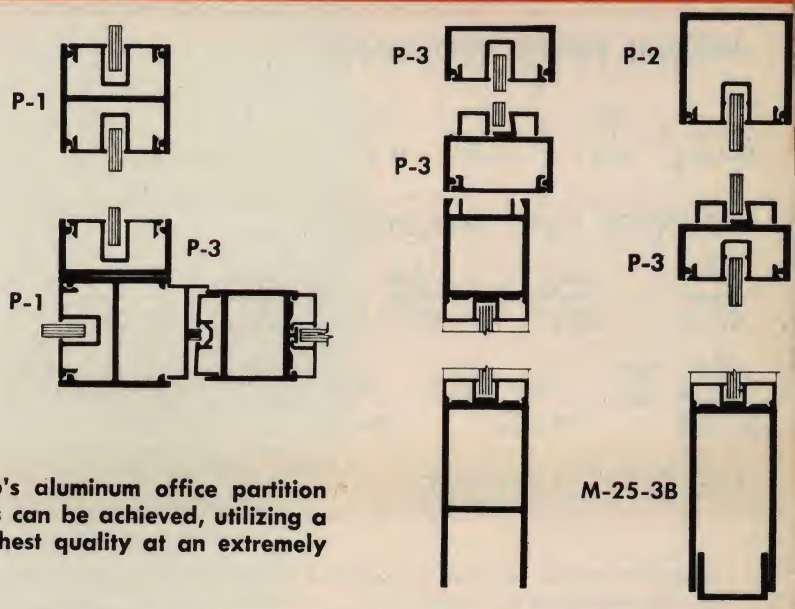
ALUMINUM PARTITION SECTIONS

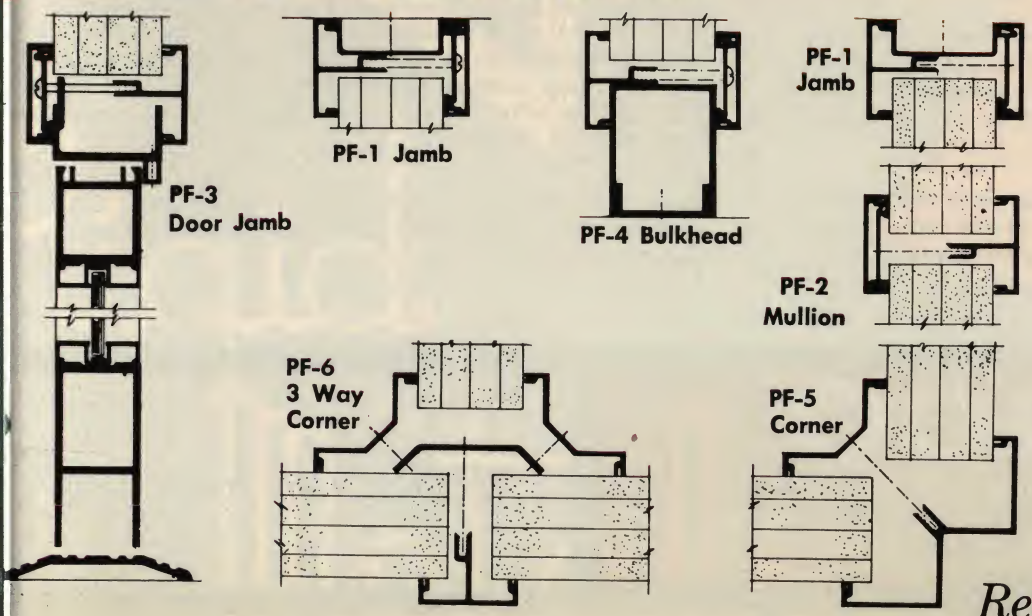


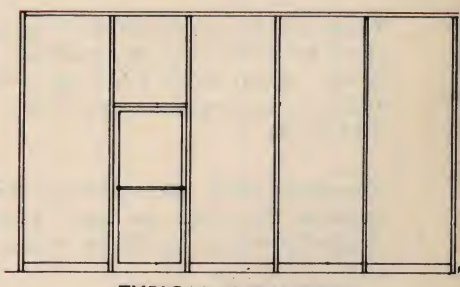
TYPICAL ELEVATION



Simplicity, flexibility and beauty of design characterizes Rebco's aluminum office partition sections. Counter height, free standing or floor to ceiling units can be achieved, utilizing a minimum number of sections, resulting in partitions of the highest quality at an extremely economical cost.

ALUMINUM ONE HOUR FIRE WALL PARTITIONS





TYPICAL ELEVATION

Rebco fire wall partition moldings are designed for use with 2¼" cement asbestos board. A minimum of exposed fastenings, flexibility of application, speed and ease of installation plus the natural beauty of aluminum combined, result in partitions of outstanding appearance and durability.

SPECIFICATIONS

Storefront metal shall be as detailed on the drawings and as manufactured by Rebco, Inc., Los Angeles, Calif., and West New York, N. J.

Aluminum shall be of 6063-T5 alloy, and exposed surfaces shall be finely ground, polished and buffed to a mirror finish. Metal shall then be given a polished alumilite finish in accordance with Alcoa specification "Alumilite 204-A1-R1."

Storefront metal and moldings shall be set in their correct location and shall be level, plumb, square and at their proper elevation and plane, and in alignment with all work.

Entrance units shall be complete factory assemblies including doors, frames, sidelights, transom and hardware. Corners of doors shall be accurately joined and fitted with a lapped, butt joint and welded. The weld shall thoroughly penetrate the material and produce a complete fusion of metal between stiles and rails. All welding shall be on the unexposed surfaces to prevent pitting, discoloration, weld halo or other surface imperfections. No mechanical joints will be permitted.

Doors shall be glazed using vinyl strips provided. Glass shall be blocked in doors using special blocking screw provided with each door.
